

INFORMATION SYSTEMS SECURITY

Certified Information Systems Security Professional (CISSP)

CISSP is a vendor-neutral certification and is the ideal credential for those with proven deep technical and managerial competence, skills, experience, and credibility to design, engineer, implement, and manage their overall information security program to protect organizations from growing sophisticated attacks.

The CISSP was the first credential in the field of information security to meet the stringent requirements of ISO/IEC Standard 17024. Not only is the CISSP an objective measure of excellence, but also a globally recognized standard of achievement.

The CISSP curriculum covers subject matter in a variety of Information Security topics. Before 2015, it covered 10 similar domains. From 2015, the CISSP curriculum is divided into the following 8 domains:

- Security and Risk Management
- Asset Security
- Security Engineering
- Communications and Network Security
- Identity and Access Management
- Security Assessment and Testing
- Security Operations
- Software Development Security

Prerequisites for Attendees

Participants must have preliminary skills in domains like: Systems Audit, Linux/UNIX, Windows, Networking, Systems Administration, Programming, database design and administration etc.
